## Education

|                                                                |                                              |
|----------------------------------------------------------------|----------------------------------------------|
| <b>National Tsinghua University</b><br><i>M.S., Physics</i>    | Sep. 2021 – Jul 2023<br><i>GPA: 3.7/4.3</i>  |
| <b>National Chung Cheng University</b><br><i>B.S., Physics</i> | Sep. 2017 – Jun 2021<br><i>GPA: 3.59/4.3</i> |

## Job Experience

|                                                                                                                                                                                                                                                                                                             |                    |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|
| <b>SI / PI Engineer</b><br><i>ASUS, Taiwan</i>                                                                                                                                                                                                                                                              | Sep 2023 – Present |
| <ul style="list-style-type: none"><li>• Board level PI/SI analysis - NB, Server, Phone Projects</li><li>• PI: layout improvement, MLCC arrangement and optimization</li><li>• SI: routing solutions for DDR, GDDR, and HSIO</li><li>• Design an automated simulation process for signal integrity</li></ul> |                    |

## Other Experience

|                                                                                                                                                                                                                                                                                              |                                       |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------|
| <b>Research Assistant</b><br><i>Physics, National TsingHua University, NTHU</i>                                                                                                                                                                                                              | Sep. 2021 – Jul 2023<br><i>Taiwan</i> |
| <ul style="list-style-type: none"><li>• Design of microwave experiment system, and maintain Cryogenic measurement system</li><li>• Research on the application of quantum optics in superconducting qubit</li><li>• Simulation of quantum optical combination of microwave systems</li></ul> |                                       |
| <b>Research Assistant</b><br><i>Physics, National Chung Cheng University, NCCU</i>                                                                                                                                                                                                           | Sep. 2019 – Jun 2021<br><i>Taiwan</i> |
| <ul style="list-style-type: none"><li>• Design optical experimental systems and maintain laser systems</li><li>• Data simulation and analysis with Mathematica</li><li>• Multi-sequence experiment control with Labview</li></ul>                                                            |                                       |

## Awards & Honors

|                                                                                                   |      |
|---------------------------------------------------------------------------------------------------|------|
| <b>Merit Award in the poster presentation</b><br><i>Physical Society of Taiwan</i>                | 2023 |
| Poster title: Observe EIT in a lambda system formed by superconducting artificial atom            |      |
| <b>Principal's Award</b><br><i>Department of Physics, National Chung Cheng University, Taiwan</i> | 2017 |

## Specialized Skills

- Signal integrity automation using Ansys Python libraries (pyedb, pyaedt)
- Proficient tools: HFSS, SIwave, Sigroty, ADS, Hspice, Allegro PCB, ICAT
- Measurement instrument: VNA
- Programming Languages: Python, C, Matlab
